SUMMARY

Automation & integration engineer with an Automation Engineering degree, building reliable self-hosted n8n automations. I treat integration as the hard part — auth, retries, validation, error handling, recovery — including the reliability layer around an LLM, validating what a model returns before trusting it. Two production-shaped projects shipped on my own infrastructure.

TECHNICAL SKILLS

Automation: n8n (self-hosted), webhooks, HTTP/REST integration, workflow validation; Make.com / Zapier aware

Infrastructure: Docker, Docker Compose, PostgreSQL, Linux, Cloudflare Tunnel, rclone, systemd

AI: LLM integration (Gemini), structured-output validation & reconciliation, prompt design

Languages: Python, SQL (PostgreSQL), Bash, YAML

Practices: secret management, scheduled off-site backups, disaster recovery, QA/testing, Git

PROJECTS

AI Invoice-Extraction Pipeline — n8n · Gemini

[GitHub](#)

- Upload → Gemini extracts → the pipeline validates types and reconciles subtotal + tax to the total before saving; suspect extractions route to a human review queue with reasons, instead of being stored silently wrong.
- Retry On Fail for flaky API calls vs. validation for confidently-wrong output (two failure types, two tools); idempotent inserts, money as NUMERIC, line items as JSONB. Live on my own instance.

Self-hosted n8n Platform — Docker · Postgres · Cloudflare

[GitHub](#)

- Docker Compose (n8n + Postgres, healthcheck race fixed, pinned image), encrypted secrets, nightly off-site backups to Google Drive; disaster recovery proven by restoring into a twin instance.
- Live over HTTPS via Cloudflare Tunnel (no open ports / static IP); documented cross-host migration runbook; Slack failure-alerter for monitoring.

Automated Currency Sync & Billing System — Python · PostgreSQL · Linux

- systemd-scheduled pipeline that fetches FX rates from an API and logs customer usage events; billing module generates utility-style PDF invoices from relational records via ReportLab.

PROFESSIONAL EXPERIENCE

Software Developer, Octo (formerly Datenlotsen)

Cairo, Egypt

Enterprise product configuration & QA

May 2023 – Apr 2026

- Delivered configured solutions on an enterprise .NET/WPF + PostgreSQL product for institutional clients — modeling data entities and attribute relationships through its visual configuration tooling and XML, plus multi-step wizards with validation rules.
- From my own idea, built an internal tool with AI-assisted development that pulled records from the database and visualized entity/attribute relationships in a single view.
- Performed QA on releases — reproduced tickets, verified fixes, and helped keep international rollouts stable.

Reserved Officer (Lieutenant), Egyptian Armed Forces

Alexandria, Egypt

Mandatory service

Apr 2019 – Oct 2021

- Coordinated logistics, task assignment, and personnel operations in high-pressure environments.

EDUCATION & TRAINING

Arab Academy for Science, Technology & Maritime Transport

Alexandria, Egypt

B.Eng. Mechatronics, Robotics & Automation Engineering — GPA 3.1/4.0

2013 – 2018

Information Technology Institute (ITI), powered by EPITA

Egypt

AI Pro-Trainee — Python, Machine Learning, Computer Vision, NLP, MLOps

2021 – 2022

CERTIFICATIONS

Google Data Analytics (Coursera) · Neural Networks & Deep Learning (Coursera) · Fundamentals of Deep Learning (NVIDIA) · Advanced & Professional Data Analysis Nanodegrees (Udacity)

Languages: English (Professional working proficiency) · Arabic (Native)
